

GN RESOUND REMODELING INCLUDING NEW DELIVERY DOOR AND SERVICE LANE

GN ReSound is remodeling their space to expand the locker room, down size the production training room and expand the device recycling area. While doing so, they are resolving an internal flow of work by creating a new delivery door on the north side of the building. This area will be used for delivery of FedEx parcels out of a 24' panel truck. When the product work is complete the product will be shipped out of the loading dock area on the south of the building. This flow of work will be more efficient since the product will all flow in one direction.
