

Chu Vision Institute exterior renovation proposal

To Whom it concerns:

The property at 9117 Lyndale Ave South was built in 1969 as a Chesters restaurant and the appearance of the building has not changed in 55 years. We would like to update the exterior of the building to create a more modern look. The current exterior is an outdated brick and we had hoped to simply paint the brick white however we learned that this is not an option with the City of Bloomington. Applying stucco seems to be the only other solution and we feel that it would enhance the curb appeal immensely. Chu Vision Institute and Chu Surgery Center are a clinic and ambulatory surgery center respectively and will continue in that capacity. Our goal is to invest significantly in the building to keep it looking welcoming and vital for many years to come and we look forward to the City of Bloomington recognizing and supporting this investment.
