Re: Verizon Wireless Light pole replacement/small cell antenna installation – Southtown Mall

Nick-

Verizon Wireless is proposing to remove two existing light poles located on the outdoor parking ramp structure at the Hilton @ 7803 Penn Ave, Bloomington and replace with two similar light poles that will also contain 2 small cell antennas and 2 radio units on each light pole.

Verizon RF Engineering/System Performance team has identified this mall as one with inferior wireless coverage. The current macro installation covering this site is becoming over-capacitated and these small cell installations will allow for that macro site to offload some of its "traffic" and provide much improved coverage to Southtown Mall.

Detailed renderings including equipment specifications, utility routes, construction methodology, exact light pole location, and more can be found within the drawings that will accompany this application. Please do not hesitate to contact me with any questions.

Thank you.
