RE: Antenna Install -10801 Bush Lake Road, Bloomington, MN Verizon
Network Facility

Dear Nick Johnson,

Enclosed please find a site sketch detailing a proposed installation of antennas façade mounted to a garage bay at the Verizon Wireless facility located at 10801 Bush Lake Road – PID 3211621330113. Verizon is seeking approval to proceed to building permit application for the proposed project.

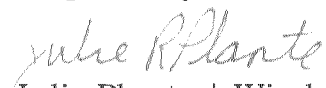

Verizon proposes installing antennas on the side of the garage for antenna testing purposes. The various antennas and radios vary in size with the largest being 30.4" x 15.9" x 8.1". The antennas will be façade mounted at a centerline of 20' 8" and the overall roof height is 21' 8". The antennas and radios can be painted to match the building if required. There are fourteen (14) small cell antennas proposed and four (4) radios proposed.

The attached site sketch includes the size details of all equipment, and also an artist rendering on sheet SS-3. Please advise what additional information you might require for your review.

The work is anticipated to start October 2020.

I welcome a phone call or video meeting to answer any questions. Thank you for your time to review this proposal.

Respectfully,

Julie Plante | Wireless Real Estate
