

My project plans are to operate with 60 or less children. My hours of operation will be 6am-6pm. I plan to use the entire side of 396 American Blvd E., including the warehouse space for an indoor large motor area for the children. The bottom front level I will care for infants and toddlers. The two areas to the left of the entrance will be used for infants, the one area for their cribs and sleeping and the other area for play.

The space to the right of the entrance will be used for toddlers. Currently one space is partitioned off by a glass door barrier. I will add an additional barrier using childcare dividers.

The additional bottom level has space in between the front area and the warehouse that area will be the play area and rest area for my preschoolers. That will also be where all children will eat lunch.

The mezzanine area will be for school age children. The max capacity will be 24 school-age children +2 staff, 26 person occupancy.

I will prepare meals on site however they will be minimal preparation and cooking involved. For example, breakfast will be cereal, bagels, fruit, and milk. Lunch will be sandwiches and cheese and crackers, pasta salads, fruit and veggies and milk. Snack will be crackers, pretzels, veggies, and milk.

Drop off will take place at the front door. The plan is to install a system that allows families that have a code in. I plan to section off this area to make it a more enclosed area.

The west side of 396 between the building and the fence will be the outdoor place space for the children. I plan to install a new privacy fence and remove the large rocks.

Please let me know if you have any questions.

Thank you.

Many Blessings,
Nikkii Minke
