

Any fences over 7' in height requires a building permit and plans designed by a MN licensed Engineer.

Max height is 6 feet tall when placed up to the property line.

sunshades must meet a 5 foot setback from the side property line.

Building permit shall be required if sunshade is attached to the building - provide manufacturer specs.

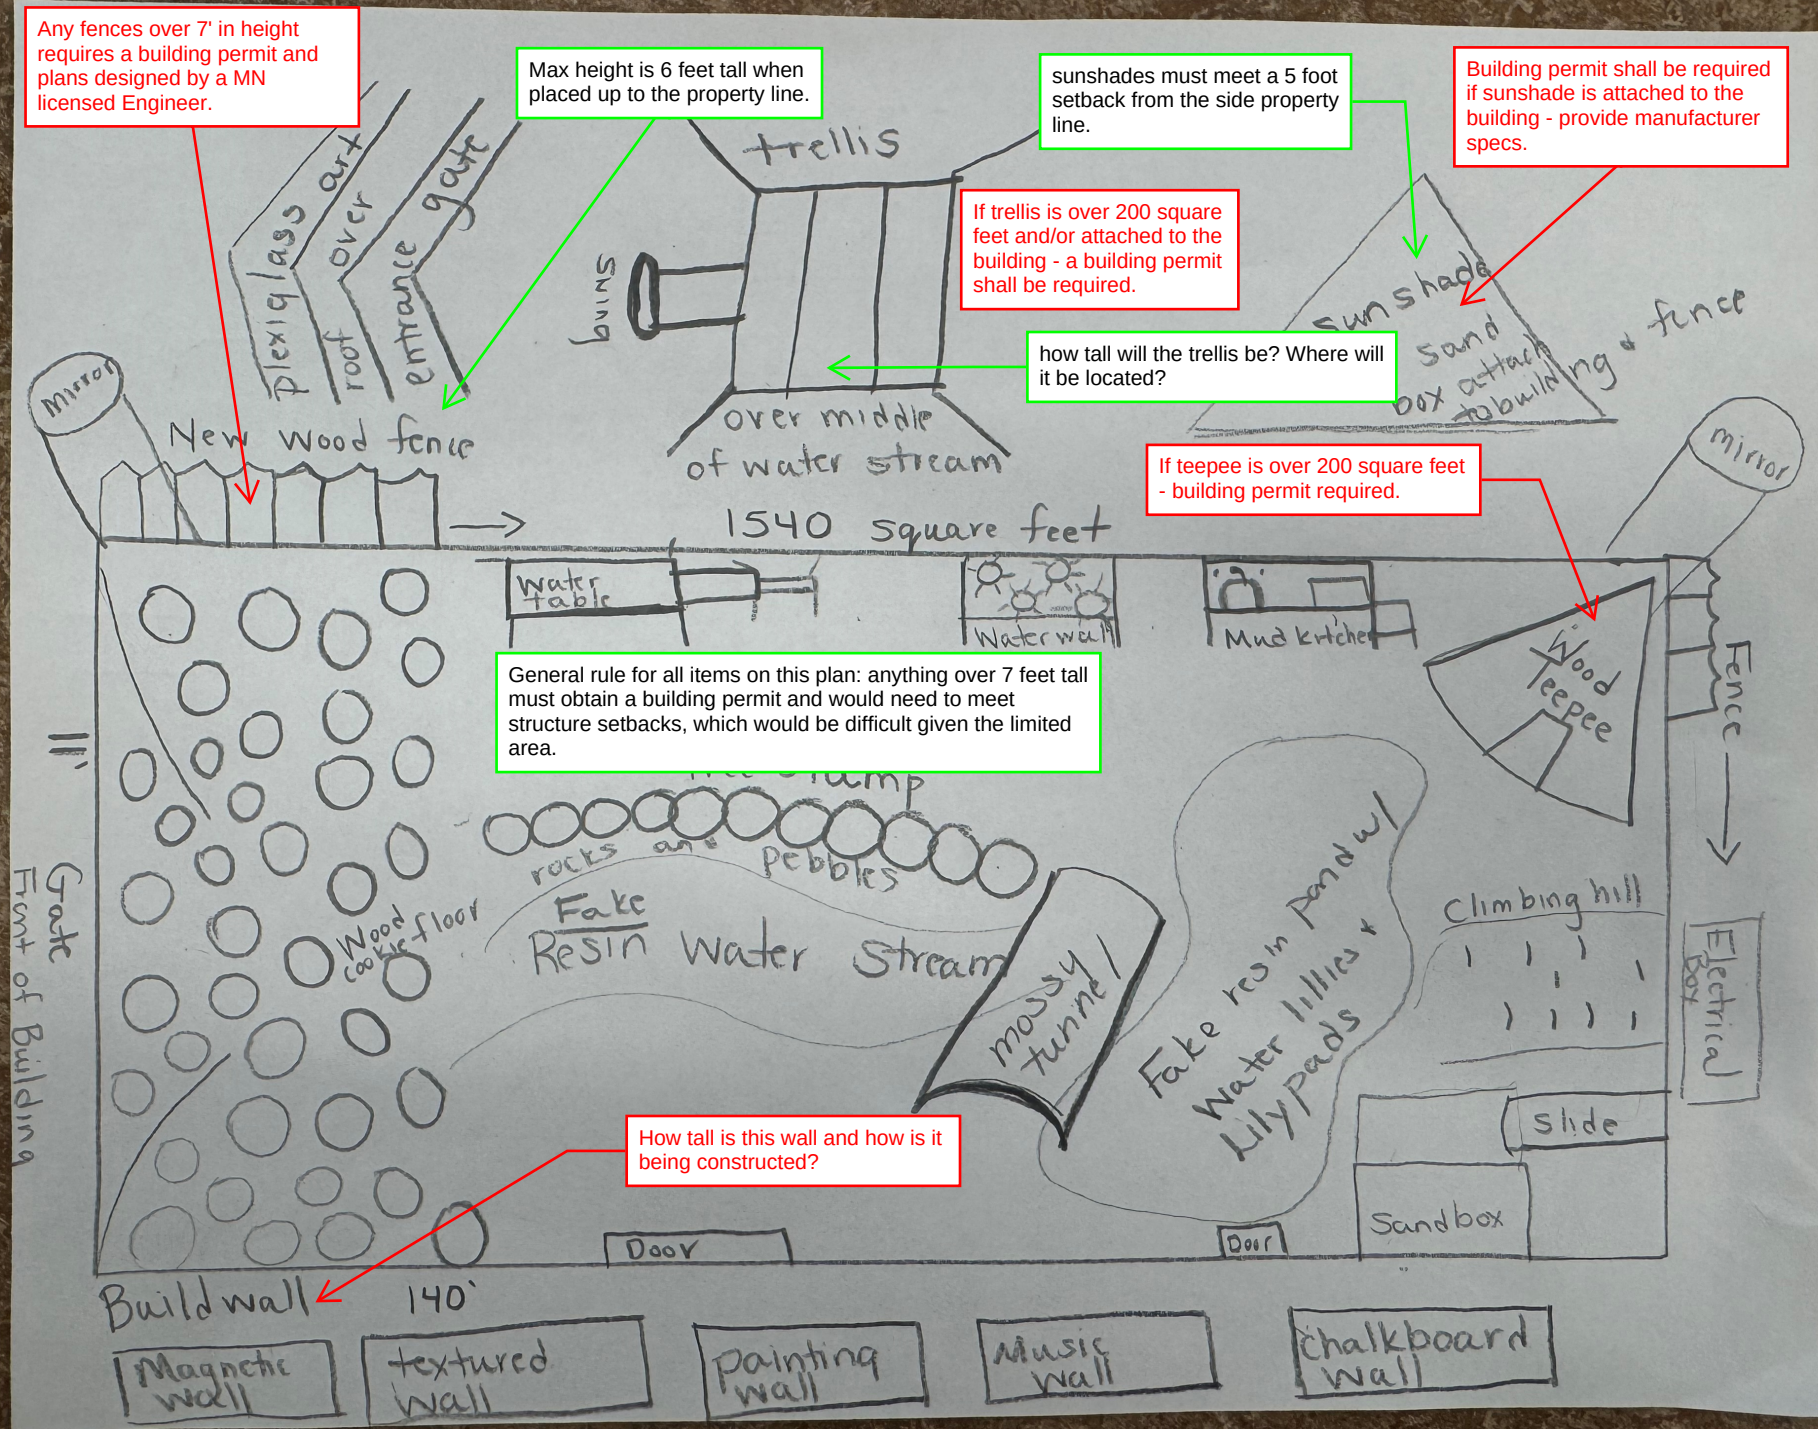

If trellis is over 200 square feet and/or attached to the building - a building permit shall be required.

how tall will the trellis be? Where will it be located?

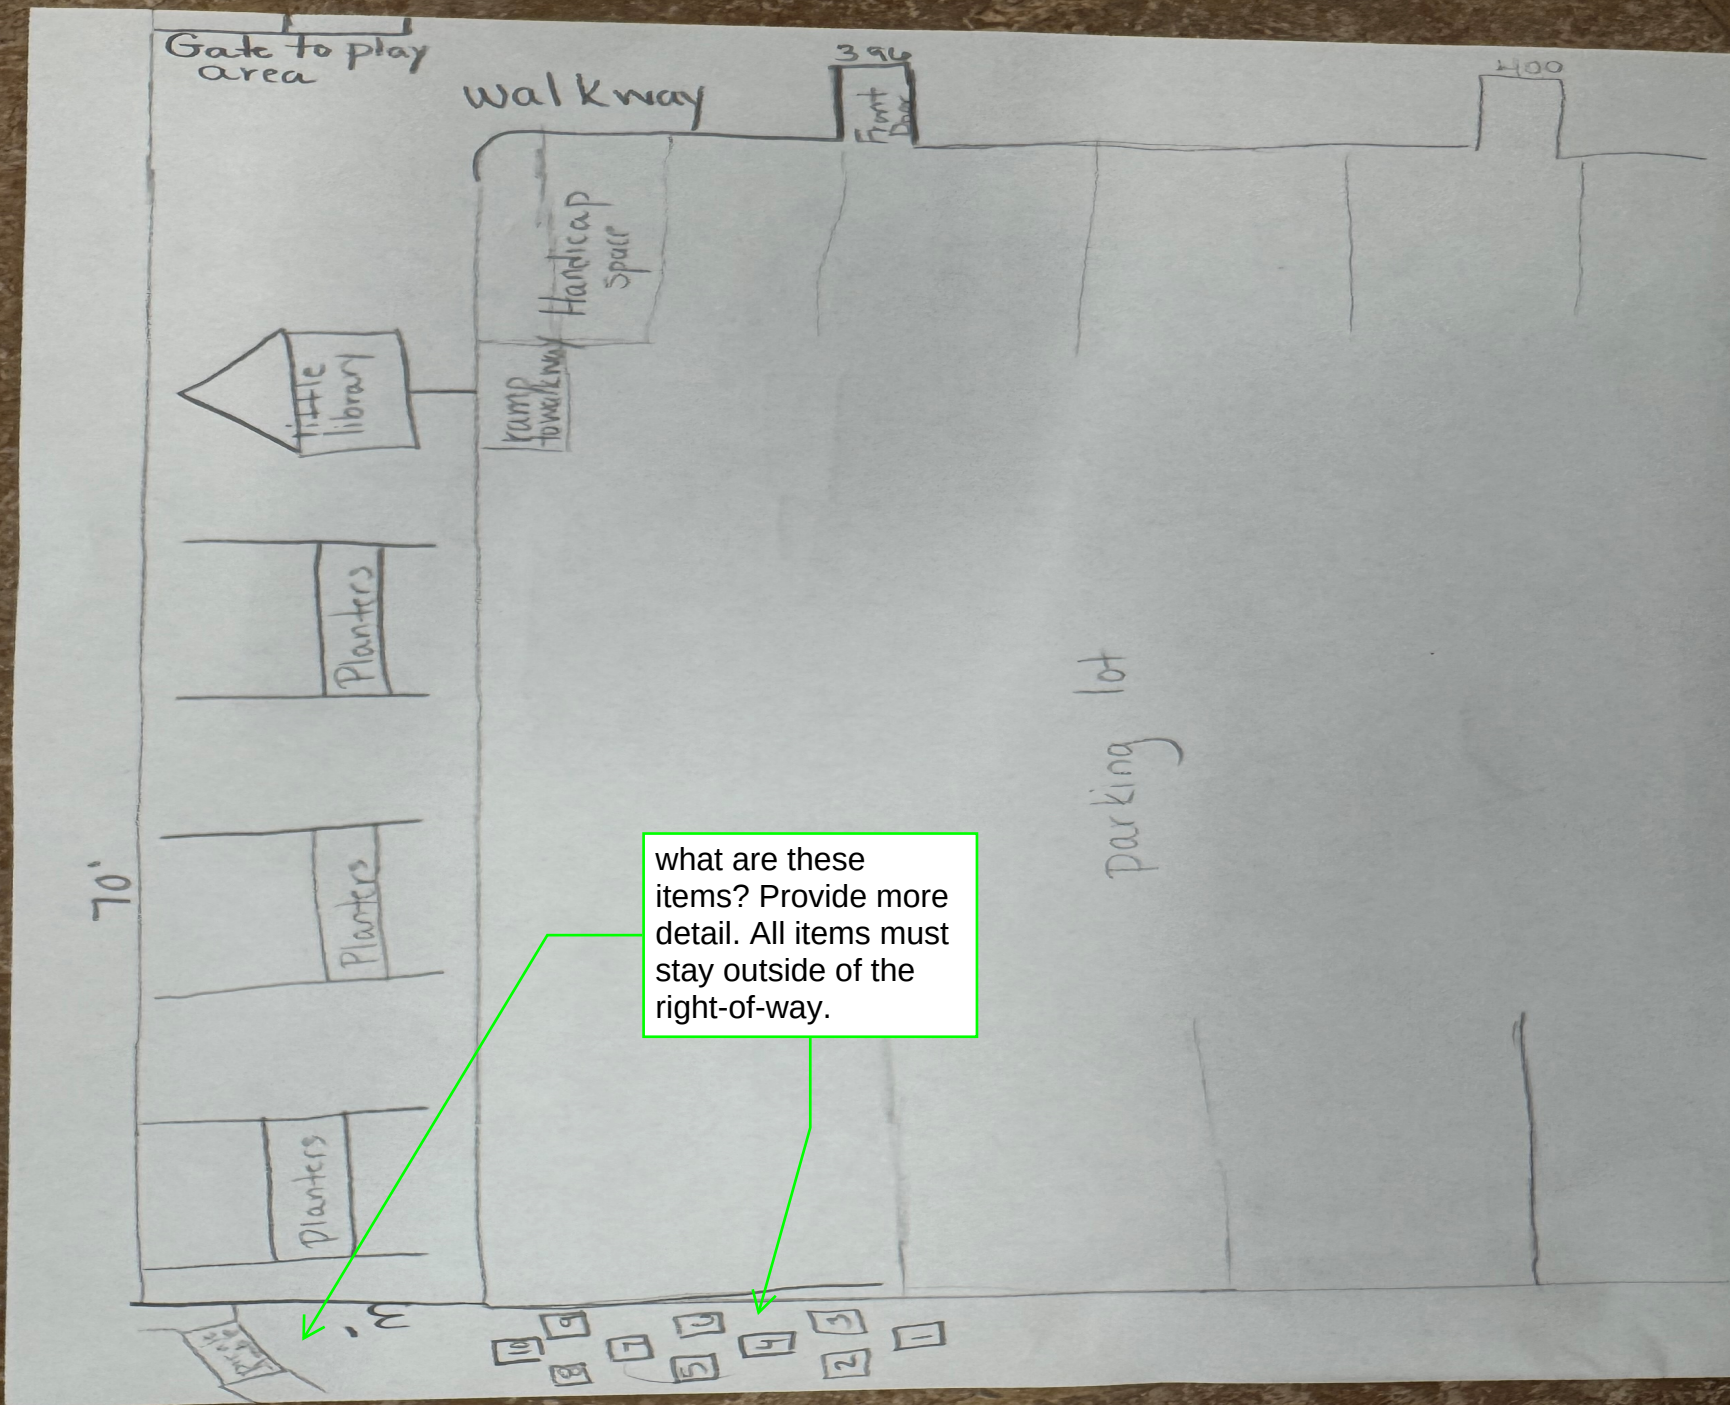

If teepee is over 200 square feet - building permit required.

General rule for all items on this plan: anything over 7 feet tall must obtain a building permit and would need to meet structure setbacks, which would be difficult given the limited area.

How tall is this wall and how is it being constructed?

what are these items? Provide more detail. All items must stay outside of the right-of-way.
